→ An ECM Company to Watch | CYA Technologies

One of the best things about The ECM Blog is hearing firsthand how software companies are reshaping tomorrow's enterprise. If I was actually a journalist by day, I might even break a story or two. (Sigh)

You know what I mean if you saw [CYA Technologies'](#) big [IBM/FileNET](#) announcement a few weeks ago.

I had a call with [CEO Wayne Crandall](#) and [Mike Fernandes](#), who heads up the product group, and got a lot smarter on how they've built out their SmartRecovery Suite.

In a nutshell, the Connecticut-based company, who has relationships with most ECM companies, makes software that smartly monitors big ECM repositories and makes sure your content (documents, records, folders) can be restored to its original state.

But here's the kicker. [CYA's SmartRecovery for FileNET](#) insures all the [metadata](#) associated with that content is also restored. CYA describes it as "object-level integrity."

In case you missed their press release, here's what you [IBM |FileNET](#) folks should forward to your CTO or FileNET integrator.

- Live Capture:** CYA SmartRecovery captures changes in the object store in as little as every 15 minutes without any application or system down time.
- Preservation:** Using IntelliCapture™ technology, CYA SmartRecovery checks to ensure integrity between content and its metadata, and proactively flags inconsistencies.
- Recoverability:** CYA SmartRecovery recovers objects back to their last "original" state within FileNet P8's object store without any downtime.
- Reduction of Data Loss Window:** CYA SmartRecovery supports disaster recovery solutions such as IBM Tivoli Storage Manager, EMC NetWorker and Symantec Veritas NetBackup.

Lastly, the way CYA and their [interactive agency](#) handled their blogger outreach was classy. As someone [who provides similar social media services](#) to clients, it was refreshing to see a group that did their homework and was ready to engage without wasting anybody's time.
